

Weekly Report: [W12]

General Information

- **Group ID:** 52
- **Group Name:** Group 52
- **Class:** 25A01
- **Project Name:** Super Mario Game
- **Date range:** 2026-08-23 – 2026-08-29
- **Github Repository:** <https://github.com/ndmhuy/SuperMarioGame.git>

Tasks Completed This Week

This was a quiet week — one commit, total, on every branch. `git log --since='2026-08-23' --until='2026-08-29 23:59:59'` returns exactly one hit on `dev` and the identical one hit with `--all`, so no parallel branch work happened out of sight either. Per the pre-flight checklist (`docs/REPORT_RULES.md` §2.1): `git fetch --all` was run before reading any repository state; `dev` is even with `origin/dev` (`git rev-list --left-right --count dev...origin/dev` → `0 0`); no branch is ahead of `origin/dev` with work dated inside this window. This is reported plainly rather than padded with adjacent weeks' work.

25125083 - Nguyễn Đình Minh Huy (Member A - Engine, Physics & Player/Item Entities)

Branch: `dev` (merge of `A/fix/windows-crash-and-playtest`)

- **Task 1: Merged pull request #15 into `dev`** : commit `0258f1f` (Sun Aug 23 20:35:28 +0700), merging `A/fix/windows-crash-and-playtest` (parent `5bc27c1`) into `dev` (parent `f0a61f4`). **This is the only event in the window, and it is a merge, not new authorship dated this week:** all 18 commits that branch carries (`4f80862` .. `5bc27c1`) are timestamped 2026-08-21/22 — inside **W11**, whose own report already covers the World 1-3 Windows `SIGABRT` crash fix, ten playtest defects, the test-save hermeticity fix, the entity-catalogue editor palette ([EntityCatalogue.hpp](#)), the HCMUS LaTeX report edition,

and the generated UML class diagram. Nothing in this window is new work; the merge simply landed W11's branch on `dev` two days into W12, so its content is attributed to W11 in the per-week accounting above and not re-claimed here.

25125084 - Trần Gia Huy (Member B - Input, Sound & Gameplay Systems)

- **No activity.** `git log --author=FubuGold --since='2026-08-23' --until='2026-08-29 23:59:59' --all` on every ref returns zero commits. Per `docs/REPORT_RULES.md`'s accuracy policy, this is reported as zero rather than omitted or padded.

AI Usage Declaration

- **Not applicable this week.** The only repository event was merging a pull request that was itself already AI-assisted (declared in W11's own report); no new AI-assisted authorship happened between 2026-08-23 and 2026-08-29. `logs/agent_history.log` has no entries timestamped in this window (the last entry before the gap is `2026-08-22 21:47:00`; the next is `2026-08-30 15:42:00`), confirming no agent session ran during it.

Tasks Planned for Next Week

This report is compiled retrospectively on 2026-09-02, after W13 already happened, so rather than reconstruct a forward-looking plan that was never actually written down at the time (no log entry exists between 2026-08-23 and 2026-08-30 to draw one from), this section states plainly what W13 in fact became — see `docs/Group52_13/52.md` for the full account: a submission-package pass, a level-completion/camera defect fix, Endless Mode plus a level-solvability oracle, a full SPEC/feature audit (2026-08-31) with remediation phases R1–R20, and the R21 release-defect batch (two waves, 25 items total) covering pipes, the map editor, the entity registry, and a real dynamic-lighting shader.

Issues & Resolutions

Nothing to report this week, because nothing was fixed this week. The only repository event — merging PR #15 — brought in fixes that were root-caused and resolved during W11 (the Windows `SIGABRT` static-destruction crash, ten playtest defects, etc.); their Problem/

Resolution write-ups belong to, and already exist in, W11's report so as not to duplicate them here. No new defect was diagnosed or closed in the 2026-08-23 – 2026-08-29 window.
